JOSH JOSEPH

CREATIVE COMPUTING | UX/UI & INTERACTIVE DESIGN | GRADUATING 2027

Bath / London, UK | JoshJoseph10@outlook.com | +44 7472 876584 | Eligible to work in the UK

github.com/JoshJoseph0 | linkedin.com/in/joshjosephai

Creative Computing student graduating in 2027 with hands-on experience building interactive and API-driven software in JavaScript, React and Node.js. I enjoy getting below the surface of a problem - breaking systems into parts, tracing where things fail, testing different approaches and understanding the trade-offs. Looking for a graduate UX/UI or product design role where I can combine prototyping, accessibility and frontend development to make useful experiences easier to use.

TECHNICAL TOOLKIT

Development: JavaScript, React, Node.js, React Native, HTML/CSS, p5.js
Systems & debugging: application state, cross-component debugging, performance testing, browser rendering and fault tracing
Integration & data: REST APIs, JSON, third-party service integration, API configuration and client/server data flow
Product & deployment: rapid prototyping, accessibility, UI/UX testing, Vercel, Netlify and deployment trade-offs

SELECTED TECHNICAL PROJECTS

Interactive Museum Experience - "George" | Drawing Together touring exhibition | 2026

- Designed and prototyped a browser-based museum experience around George, a century-old artist's mannequin, combining chaptered storytelling, audio, audience questions and interactive colouring/drawing for children and families.
- Worked through real exhibition constraints including QR/mobile-browser access, accessibility and testing; compared static Vercel/Netlify deployment with backend persistence and kept the architecture simpler when saved responses were not required.

Creative Web - AI User Creator | Bath Spa University | 2026 - Present

- Developing a visual web application concept that lets people configure an existing language model and explore how changed instructions affect its responses in simulated situations.
- Shaping a Build, Test, Observe, Change and Re-run interaction loop, using simple language and visual building blocks to make AI experimentation more approachable.

AI Desktop Assistant - "Jarvis" | Bath Spa University | 2026 - Present

- Building a Windows assistant in React, JavaScript and Node.js that combines calendar, weather, news, notes and stock data through multiple APIs in one interface.
- Integrated speech-to-text and text-to-speech services and debugged failures across audio, API configuration, application state and UI responsiveness rather than only patching the visible symptom.

Large-scale Interactive Visualisation | Personal project | 2026

- Built p5.js/browser prototypes exploring how to represent six million individual points with pan/zoom interaction, turning a simple visual idea into a rendering and performance problem.

RELEVANT EXPERIENCE

Freelance Video Editor | Confidential YouTube channel | 2023 - 2025

- Produced digital content for an audience of around 2.2 million subscribers, working to deadlines, handling detailed feedback and iterating quickly while maintaining consistency.

VOLUNTEERING

Website & Digital Volunteer | Home-Start Watford & Three Rivers | 2022 - Present

- Refresh and maintain the charity website, improve SEO and make practical changes from stakeholder feedback while supporting its wider digital presence.

Borehamwood Youth Council | Community volunteer | 2021 - 2022

- Worked with other young people to develop practical, cost-conscious ideas for improving local opportunities and services for young people.

EDUCATION

BA (Hons) Creative Computing - Bath Spa University | Expected graduation: 2027
Project-based degree spanning software development, interactive systems, UX and creative technology.
Level 3 Extended National Diploma - Digital Content Production | West Herts College
9 GCSEs passed, including Maths and English
